

"Sondedyse 1/2""

Sonde Nozzles – durable stainless steel quality

With us, standard is more than just standard. These sonde nozzles are manufactured in stainless steel and offer significantly longer service life compared to similar products on the market.

The construction ensures high operational reliability and resistance under demanding conditions – ideal for professional use where quality and durability are essential.

A HIGH END version is also available, taking functionality one step further. In addition to the same robust stainless steel construction, it features replaceable nozzles, allowing adjustment according to pump capacity and pressure. This provides optimal flexibility and precise adaptation to the task.

Benefits:

- Made of stainless steel
- Long service life and high wear resistance
- Professional-grade quality
- HIGH END version with replaceable nozzles
- Adjustable to pump flow and pressure
