

Bun thermo II

Part of cloud-based data/alarm system from Loggerflex

Bun Thermo II has 2 x external temperature sensors with 1.5 meter cable - the sensor can handle down to -55°C and is IP67 - perfect for places where multiple temperatures must be measured, especially extreme cold.

All the Bun products are easy use wi-fi. Adjustable upload and log interval provides the possibility of ultra-long battery life. It provides a good overview, and it is possible to share to several and different alarm intervals on different devices. Bun helps you with the best overview, which makes it the perfect tool for collecting data over time.

It can send emails, text messages and more. You have access to the history, graphs and periodic reports on any platform. Reports and graphs can also be extracted with just a few clicks.

Free version and subscription solution, contact us to hear more.
