

Phantom VEO 440

The Phantom VEO 440 brings the power of 4 Mpx imaging to high-speed applications via a compact and lightweight (5 lbs/2.3 kg) form factor. The 4Mpx (2560 x 1600) sensor ensures excellent image quality due to its high relative sensitivity and compatibility with 35mm optics.

The lens mounts are interchangeable which grants researchers and producers the flexibility to accommodate changing needs. The VEO 440 can utilize Nikon, PL, C, and Canon EF (with electronic control) lenses.

The milled aluminum body is available in two styles. The L-model has streamlined connections including a standard RJ45 Ethernet port and is typically found in laboratory environments while the S-model adds locking connectors, additional signals and data management features that are helpful in remote and production workflow situations.
